

## AirGlove - *Proven Patient Solution for Venous Access*

### Patient Solution

AirGlove warming system works in just 3 minutes, gently heating the patients arm.

- ✓ Patient Safety
- ✓ Patient Comfort
- ✓ Easier Cannulation Saves Time
- ✓ Saves Costs
- ✓ No Cross Contamination

**Healthy and Safety  
at Work Act 1974**

### Patient and staff safety

No more carrying buckets of water or microwaving heat packs. Infection control and health and safety policy concordant.

### Patient Comfort

Reduced needle sticks and a comfortable and relaxing experience for the patient

### Clinical Benefits

Easier cannulation for fragile and hidden veins. Gentle warming raises the veins, reducing number of failed cannulation attempts

### Approved medical device

AirGlove: 3 years of development, research, testing and clinical trials by GreenCross Medico in conjunction with NHS innovations South East.

After 3 minutes of air warming the nurse can then access a vein and insert a cannula and dressing.

## Infection Control Notification
